IDIS

Network Camera

Operation Manual

DC-T1233WHX

Powered by **Direct IP**™

Before reading this manual

This is a basic operation manual for use of an IDIS network camera. Users who are using this product for the first time, as well as users with experience using comparable products, must read this operation manual carefully before use and heed to the warnings and precautions contained herein while using the product. Safety warnings and precautions contained in this operation manual are intended to promote proper use of the product and thereby prevent accidents and property damage and must be followed at all times. Once you have read this operation manual, keep it at an easily accessible location for future reference.

- The manufacturer will not be held responsible for any product damage resulting from the use of unauthorized parts and accessories or from the user's failure to comply with the instructions contained in this manual.
- The information in this document is believed to be accurate as of the date of publication even though explanation about some functions may not be incorporated. The manufacturer is not responsible for any problems resulting from the use thereof. The information contained herein is subject to change without notice. Revisions or new editions to this publication may be issued to incorporate such changes.
- It is recommended that first-time users of this network camera and individuals who are not familiar with its use seek technical assistance from their retailer regarding product installation and use.
- If you need to disassemble the product for functionality expansion or repair purposes, you must contact your retailer and seek professional assistance.
- Both retailers and users should be aware that this product has been certified as being electromagnetically compatible for commercial use. If you have sold or purchased this product unintentionally, please replace with a consumer version.

Safety Symbols

Symbol	Type	Description
⚠	**Warning**	An important instruction or set of important instructions that can lead to severe injury or even death if not followed.
⚠	**Caution**	An instruction or set of instruction that can lead to personal injury and/or property damage if not followed.

In-Text

Symbol	Type	Description
⚠	**Caution**	Important information concerning a specific function.
✓	**Note**	Useful information concerning a specific function.

Safety Precautions

WARNING
RISK OF ELECTRIC SHOCK
DO NOT OPEN

WARNING: TO REDUCE THE RISK OF ELECTRIC SHOCK,

DO NOT REMOVE COVER (OR BACK).

NO USER-SERVICEABLE PARTS INSIDE.

REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

Important Safeguards

1. Read Instructions
All the safety and operating instructions should be read before the appliance is operated.

2. Retain Instructions
The safety and operating instructions should be retained for future reference.

3. Cleaning
Unplug this equipment from the wall outlet before cleaning it. Do not use liquid aerosol cleaners. Use a damp soft cloth for cleaning.

4. Attachments
Never add any attachments and/or equipment without the approval of the manufacturer as such additions may result in the risk of fire, electric shock or other personal injury.

5. Water and/or Moisture
Do not use this equipment near water or in contact with water.

6. Placing and Accessories
Do not place this equipment on an wall or ceiling that is not strong enough to sustain the camera. The equipment may fall, causing serious injury to a child or adult, and serious damage to the equipment. Wall or shelf mounting should follow the manufacturer's instructions, and should use a mounting kit approved by the manufacturer.

This equipment and cart combination should be moved with care. Quick stops, excessive force, and uneven surfaces may cause the equipment and cart combination to overturn.

Do not place this equipment in an enclosed space. Sufficient ventilation is required to prevent an increase in ambient temperature which can cause malfunction or the risk of fire.

7. Power Sources
This equipment should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power, please consult your equipment dealer or local power company.

You may want to install a UPS (Uninterruptible Power Supply) system for safe operation in order to prevent damage caused by an unexpected power stoppage. Any questions concerning UPS, consult your UPS retailer.

This equipment should be remain readily operable.

8. Power Cord
Operator or installer must remove power and TNT connections before handling the equipment.

9. Lightning
For added protection for this equipment during a lightning storm, or when it is left unattended and unused for long periods of time, unplug it from the wall outlet and disconnect the antenna or cable system. This will prevent damage to the equipment due to lightning and power-line surges. If thunder or lightning is common where the equipment is installed, use a surge protection device.

10. Overloading
Do not overload wall outlets and extension cords as this can result in the risk of fire or electric shock.

11. Objects and Liquids
Never push objects of any kind through openings of this equipment as they may touch dangerous voltage points or short out parts that could result in a fire or electric shock. Never spill liquid of any kind on the equipment.

12. Servicing
Do not attempt to service this equipment yourself. Refer all servicing to qualified service personnel.

13. Damage requiring Service
Unplug this equipment from the wall outlet and refer servicing to qualified service personnel under the following conditions:
A. When the power-supply cord or the plug has been damaged.
B. If liquid is spilled, or objects have hit the equipment.
C. If the equipment has been exposed to rain or water.
D. If the equipment does not operate normally by following the operating instructions, adjust only those controls that are covered by the operating instructions as an improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the equipment to its normal operation.
E. If the equipment has been dropped, or the cabinet damaged.
F. When the equipment exhibits a distinct change in performance — this indicates a need for service.

14. Replacement Parts
When replacement parts are required, be sure the service technician has used replacement parts specified by the manufacturer or that have the same characteristics as the original part. Unauthorized substitutions may result in fire, electric shock or other hazards.

15. Safety Check
Upon completion of any service or repairs to this equipment, ask the service technician to perform safety checks to determine that the equipment is in proper operating condition.

16. Field Installation
This installation should be made by a qualified service person and should conform to all local codes.

17. Correct Batteries
Warning: Risk of explosion if battery is replaced by an incorrect type.

Replace only with the same or equivalent type.

Dispose of used batteries according to the instructions.

The battery shall not be exposed to excessive heat such as sunshine, fire or the like.

18. Tmra
A manufacturer's maximum recommended ambient temperature (Tmra) for the equipment must be specified so that the customer and installer may determine a suitable maximum operating environment for the equipment.

Risk Group1
⚠ WARNING IR emitted from this product. Do not stare at operating lamp
Product tested against IEC62471

Warning: This product emits infrared light. Do not look into the IR LED.

FCC Compliance Statement

THIS EQUIPMENT HAS BEEN TESTED AND FOUND TO COMPLY WITH THE LIMITS FOR A CLASS A DIGITAL DEVICE, PURSUANT TO PART 15 OF THE FCC RULES. THESE LIMITS ARE DESIGNED TO PROVIDE REASONABLE PROTECTION AGAINST HARMFUL INTERFERENCE WHEN THE EQUIPMENT IS OPERATED IN A COMMERCIAL ENVIRONMENT. THIS EQUIPMENT GENERATES, USES, AND CAN RADIATE RADIO FREQUENCY ENERGY AND IF NOT INSTALLED AND USED IN ACCORDANCE WITH THE INSTRUCTION MANUAL, MAY CAUSE HARMFUL INTERFERENCE TO RADIO COMMUNICATIONS. OPERATION OF THIS EQUIPMENT IN A RESIDENTIAL AREA IS LIKELY TO CAUSE HARMFUL INTERFERENCE, IN WHICH CASE USERS WILL BE REQUIRED TO CORRECT THE INTERFERENCE AT THEIR OWN EXPENSE.

WARNING: CHANGES OR MODIFICATIONS NOT EXPRESSLY APPROVED BY THE PARTY RESPONSIBLE FOR COMPLIANCE COULD VOID THE USER'S AUTHORITY TO OPERATE THE EQUIPMENT. THIS CLASS OF DIGITAL APPARATUS MEETS ALL REQUIREMENTS OF THE CANADIAN INTERFERENCE CAUSING EQUIPMENT REGULATIONS.

WEEE (Waste Electrical & Electronic Equipment)

Correct Disposal of This Product

(Applicable in the European Union and other European countries with separate collection systems)

This marking shown on the product or its literature, indicates that it should not be disposed with other household wastes at the end of its working life. To prevent possible harm to the environment or human health from uncontrolled waste disposal, please separate this from other types of wastes and recycle it responsibly to promote the sustainable reuse of material resources.

Household users should contact either the retailer where they purchased this product, or their local government office, for details of where and how they can take this item for environmentally safe recycling.

Business users should contact their supplier and check the terms and conditions of the purchase contract. This product should not be mixed with other commercial wastes for disposal.

Table of Contents

Part 1 - Remote Setup

Configure basic network camera settings and all other system settings.

> ☑ Screen images may vary depending on the model.
Camera Protocol

Camera supports **DirectIP™** and **IDIS** protocols.

- **DirectIP™** protocol:
  - Using with a DirectIP™ NVR enables camera use without the need to configure network settings.
  - The DirectIP™ NVR also allows you to control all camera settings directly from the NVR, without the need for a computer.

> ☑ For more information on configuring camera settings from a DirectIP™ NVR, refer to the NVR's **operation manual**.

- **IDIS** protocol:
  - Control the camera over the network from software installed on a computer or a separate NVR.
  - Ideal for using the camera over the network from a remote location.

Switching Protocols

1 Launch the IDIS Discovery program and from the list, select a camera whose protocol you wish to change.

2 Click on the **Setup** 🖼 icon and then select **Setup** → **Protocol Setup**.
  - Alternatively, you can right-click on the mouse and select **Protocol Setup**.

3 From the **Protocol Setup** screen, select the desired protocol and then click **OK**.

4 This will activate the selected protocol. You can check each camera's protocol on the IDIS Discovery program.

> ☑ This operation manual was written based on the IDIS protocol use.

Remote Setup

1 Launch the IDIS Discovery program and then from the main screen, select a network camera whose settings you wish to change.

2 Click on the **Setup** 🖼 icon.

3 Select **Remote Setup** from the **Setup** menu to load the **Remote Setup** screen. Alternatively, you can select **Network Camera** from the main screen and then right-click to access the **Remote Setup** screen.

✓ System settings can also be changed using a remote program.
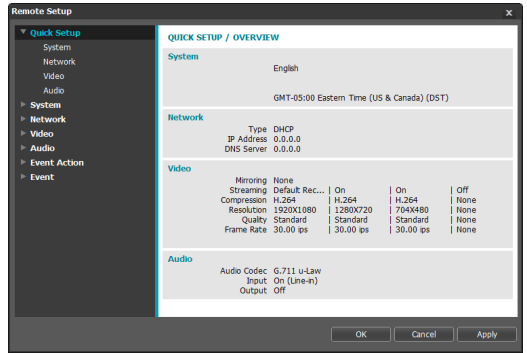

From the Remote Setup screen, select the menu on the left to display the current settings. Select an option under the menu to change the corresponding settings. Once you have changed the settings, click **OK** to apply the settings and exit from the Remote Setup screen.

Quick Setup
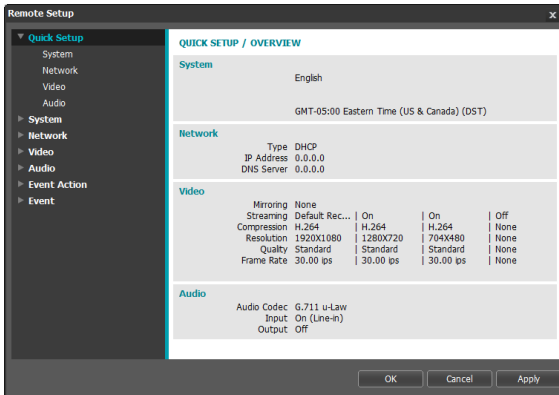

Quick Setup allows you to set up **System**, **Network**, **Video**, and other basic settings needed for camera use.

System

Change the camera's system information, add users/groups, and/or import/export settings.

General
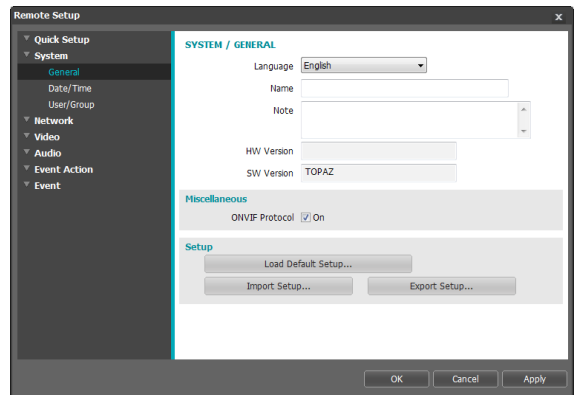

- **Language**: Select the language you wish to use for remote setup.

- **Name**: Enter a name for the camera. (Up to 31 alphanumeric characters, including spaces)

- **Note**: Enter a description for the camera.

- **HW Version/SW Version**: Indicates the camera's hardware and software versions.

- **Miscellaneous**

  - **ONVIF Protocol**: Select to enable ONVIF protocol use. However, ONVIF Protocol is available only to users belonging to the standard user groups (**Administrator**, **Operator**, and **User**). When you have connected to the camera by using the ONVIF protocol, only the currently enabled streams or events are supported and you cannot change it. There may be some more settings that cannot be changed, too. If you want to change those settings, connect to the camera by using the IDIS Discovery program.

• **Setup**

 - **Load Default Setup**: Restores all settings other than Date/Time to their factory defaults. Select Include Network Setup to load default network settings as well. For more information on network setup, refer to the **Network on page 12**.

 - **Import Setup**: Open a setup file and apply its settings to the camera. Click on the button and then select a setup file. Select Include Network Setup to apply the file's network setup settings (exc. FEN). For more information on network setup, refer to the **Network on page 12**.

 - **Export Setup**: Export the current settings as a .dat file. Click on the button and then enter a file name.

> • **Load Default Setup** and **Import Setup** options are available only to users belonging to the **Administrator** group.
>
> • When applying the settings of a setup file, do not select the **Include Network Setup** option if the network settings contained in the selected file is currently being used by a different camera. Doing so can interfere with establishing a connection with the other camera.
>
> • If IP Address, Admin Port, and/or SSL settings have been changed, Remote Setup will terminate after applying the current settings.

Date/Time
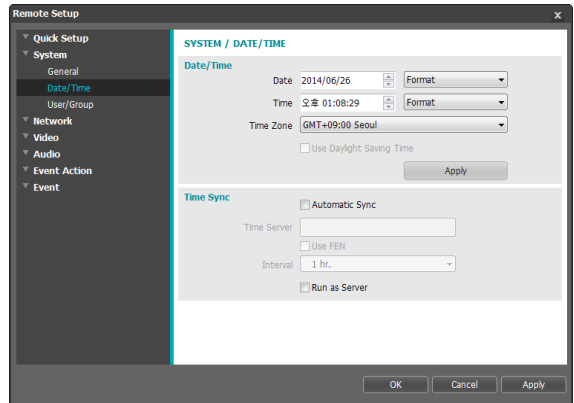

• **Date/Time**: Change the camera's date/time settings and display formats and configure the time zone and daylight saving time settings. Click **Apply** to apply the changes right away.

• **Time Sync**

 - **Automatic Sync**: Select to synchronize the system's time with the time server at a specified interval. Enter the time server's IP address or domain name and then specify the interval. If the time server is **FEN**-enabled, select the **Use FEN** option and then enter the time server's name instead of its IP address or domain name.

 - **Run as Server**: Select to run the camera as a time server. Other devices will then be able to synchronize its time setting with this camera's time setting.

> If you wish to enter a domain name instead of an IP address for the **Time Server** setting, DNS server must be configured during **Network** setup. If you wish to enter a server name instead of an IP address or a domain name, the **Use FEN** option must be enabled during **Network** setup.

User/Group

- **User/Group**: Change remote camera control permission settings for users and user groups.

  - **Add Group**: Add a new user group. Designate a name for the group and then specify control authorities.

  - **Add User**: Add a new user. Designate a name for the user, select which group to add the user to, and then enter a connection password.

  - **Edit**: Edit group authorities and/or user passwords. Select a group or user and then click on the button.

  - **Remove**: Delete groups or users. Select a group of user you wish to delete and then click on the button.

- **Allow Anonymous Login**: Select if you are using Webcasting. For more information on webcasting, refer to the **Webcasting on page 23**.

- **Allow Anonymous PTZ Control**: Check the box to allow controlling zoom of the lens remotely on a website by using the webcasting feature.

- **User/Group** settings can only be configured by users belonging to the **Administrator** group.

- There is no default password for the **Administrator** group's **admin** user.

- Standard groups (**Administrator**, **Operator**, and **User**) cannot be edited or deleted. Authorities assigned here apply identically to ONVIF protocol user groups.

- Group authorities that can be assigned are as follows:

  – **Upgrade**: Upgrade the system.

  – **Setup**: Configure the system's settings.

  – **Color Control**: Adjust the camera's brightness, contrast, saturation, and hue settings.

  – **PTZ Control**: The user can control zoom of the lens.

  – **Alarm-Out Control**: Reset alarm outs.

Network

Change the network settings, enable FEN and security features, and control network bandwidth use.

IP Address

- **Type**: Select the type of network you are using. If this option has been changed, **Remote Setup** will terminate after applying the current settings.
   - **Manual**: Select if using a static IP. You will then be able to configure the related settings manually.
    - **DHCP**: Select if connected to the network using DHCP. Click **OK** to retrieve IP address and other network settings automatically from the DHCP server.
    - **ADSL (with PPPoE)**: Select if connected to the network using ADSL. Enter the ID and password for ADSL connection and then click **OK** to log in and retrieve the IP address and other network settings automatically.
- **DNS Server**: Enter the DNS server's IP address. By using the DNS server, you will be able to use domain names instead of IP addresses when configuring the FEN, time, or SMTP server. If the camera is connected to the network via DHCP, select the **From DHCP** option to retrieve the DNS server's IP address from the DHCP server automatically. The updated address will be displayed upon the subsequent connection.

> - Contact your network administrator for more information on the camera's network connection type, the DNS server's IP address, and other related information.
> - If using DHCP or ADSL, the camera's IP address may change from time to time. We therefore recommend that you use the **FEN** feature.

FEN

Select **Use FEN** to enable the **FEN** feature.

- **FEN Server**: Enter the FEN Server's IP address or domain name.
- **Port**: Enter the FEN Server's port number.
- **Use NAT**: Select if the camera is connected to the network via a router.
- **FEN Name**: Enter a camera name you wish to register to the FEN Server. Click **OK** to check the name's availability.
- **Help Desk**: Change the settings and then click **OK** to register the entered FEN name to the FEN Server. If all the settings have been configured correctly, the FEN Server's help desk information will be shown in the **Help Desk** fields next time you enter the **FEN** setup screen.

- **Use FEN** is a feature that allows you to register a unique name for a camera that utilizes a dynamic IP address to the FEN Server and connect to the camera using the registered name instead of an IP address, which can change from time to time. In order to use this feature, you must first register a FEN name to the FEN Server.
- If network settings have been changed, click **OK** at the bottom of the setup window to save the changes and then setup the **FEN**.
- Inquire with your network administrator for the **FEN Server**'s IP address or domain name. If a DNS server has been configured under **Network** setup, you can enter the FEN Server's domain name instead of its IP address for the FEN Server setting.
- **FEN Server**'s default address is **fen.idisglobal.com**. DNS server must be configured under network setup to ensure normal operation.
- If using an IP router (or NAT), port configuration and other network functions will depend on the usage method of the IP router (or NAT).
- You will not be able to save **FEN** settings unless you click on the **OK** button next to the **FEN name** field and check the entered name's availability. In addition, you will be prompted with an error message if you do not enter a FEN name or enter a name already registered to the FEN Server. If the FEN name contains the #, \, and/or % symbol, it might not be able to connect to the camera from the IDIS Web program.

The FEN Server operated by IDIS is a service to its clients and may go offline without notice for server update purposes or due to an unexpected failure.

Port/QoS
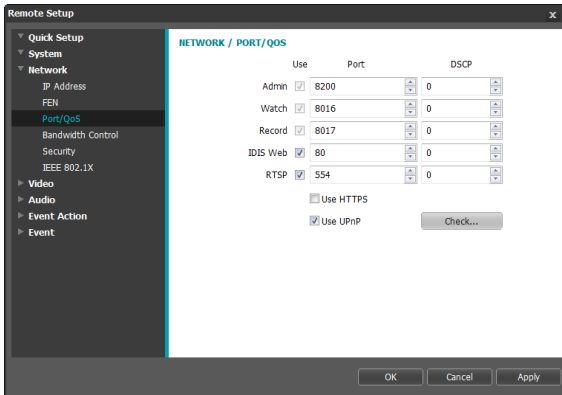

- **Use/Port**: Enable/disable ports and designate corresponding port numbers. **Admin**, **Watch**, and **Record** ports are enabled by default and cannot be disabled. By enabling IDIS Web and RTSP ports, you will be able to use the IDIS Web program or a media player that supports RTSP (Real-Time Streaming Protocol) service to connect to the camera. If this option has been changed, **Remote Setup** will terminate after applying the current settings. (Applicable to **Admin** port number only.)

- **DSCP**: Designate each port's QoS (Quality of Service) level using DSCP values. Assigning QoS levels prioritizes the ports for network bandwidth use. Higher the DSCP value, higher the QoS level and thus higher on the network bandwidth allocation priority list. Use **0** if you do not want to assign a QoS level. The network environment must support DSCP in order for this feature to function properly. Contact your network administrator for more details.

- **Use HTTPS**: Select this option to apply https protocol-based security on IDIS Web.

- **Use UPnP**: If the camera is connected to the network via an IP router (or NAT), select this option to connect to the camera without setting up port forwarding. The IP router (or NAT) must be enabled with UPnP in order for this feature to function properly. For more information enabling UPnP on your IP router (or NAT), refer to the **IP router or NAT's operation manual**.

  Click **Check** to test the current port settings. A confirmation message will appear if all the selected ports are available for use. If not, a list of recommended port numbers will be shown.
Click **Apply** to use the recommended port numbers.

- • Each port number must be unique.
- • It is not allowed to use the same port number for more than one function.
- • You can connect to the camera using a media player that supports RTSP service and monitor its video feed. If the camera is connected to the network via an IP router (or NAT) or is behind a firewall, you must open the ports. (All ports if using UDP protocol and RTSP ports if using TCP protocol) This feature may not be supported by al media player. In addition, video display on certain media players may not be smooth depending on the network status, video streaming compression method used, and/or the resolution setting. Connection methods are as follows:
 - – **Via PC**: Launch the media player (such as VLC) and then enter **rtsp://ID:Password@IP Address: RTSP Port Number/trackID='Stream Number'** (Stream Number: 1 if Primary, 2 if Secondary, and 3 if Tertiary). (e.g.: rtsp://admin:@10.0.152.35:554/trackID=1 (User: admin, Password: None, Camera IP Address: 10.0.152.35, RTSP Port Number: 554, Stream: Primary))
  - – **Via Mobile Device**: Launch the web browser and then enter **http://IP Address:IDIS Web Port Number/** (If **Use HTTPS** has been enabled, enter **https** instead of **http**). Camera's IDIS Web port number and RTSP port number must be configured correctly in order to establish a connection this way.

- • Port numbers of the remote program must be updated whenever the camera's port numbers are changed.
- • ONVIF protocol may not function if using HTTPS.

Bandwidth Control

Regulates the camera's network bandwidth use based on network traffic fluctuations.

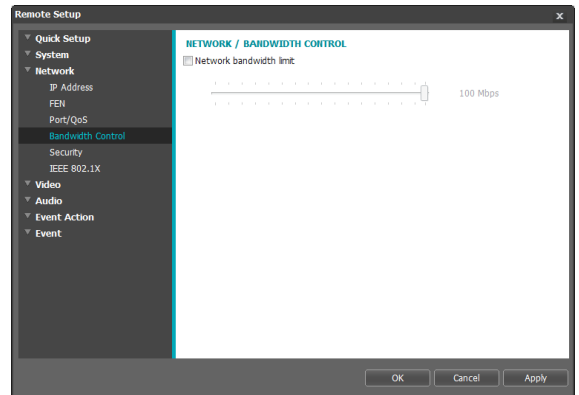

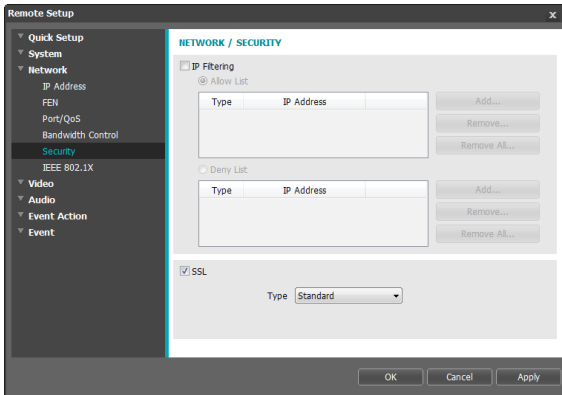

Select **Network Bandwidth limit** and then specify the maximum bandwidth. The camera will not be able to use more than the specified limit in the event of network traffic.

It may not be possible to produce the frame rate specified under **Video > Streaming** if a network bandwidth limit has been set.

Security

- **IP Filtering**: Select this option to enable IP Filtering. IP Filtering allows camera access from certain IP addresses and blocks access from others.
  - **Add**: Add new IP addresses to Allow List or Deny List. Select the **Host** option to add one IP address at a time. Select the **Group** option to define a range of IP addresses you wish to add.
  - **Remove/Remove All**: Remove individual or all IP addresses from Allow List or Deny List.

- **SSL**: Select this option to enable SSL (Secure Sockets Layer). Enabling this option applies SSL protocol protection on data transmitted out. However, programs and systems that do not support SSL will not be able to connect to the camera. If this option has been changed, Remote Setup will terminate after applying the current settings.

  ✓
  - Time server, FEN Server, and SMTP server's IP addresses must be added to Allow List under **IP Filtering** in order to use Time Sync, FEN, and Send Email features. No connection to the camera will be permitted whatsoever from IP addresses added to **Deny List**.
  - Enabling the **SSL** option may place a greater load on the external system, depending on the level of security being used.
  - This product contains software developed by Open SSL Project for use in Open SSL Toolkit. (http://www.openssl.org/)

IEEE 802.1X

Select the **IEEE 802.1X** option to enable IEEE 802.1X network connection authentication.
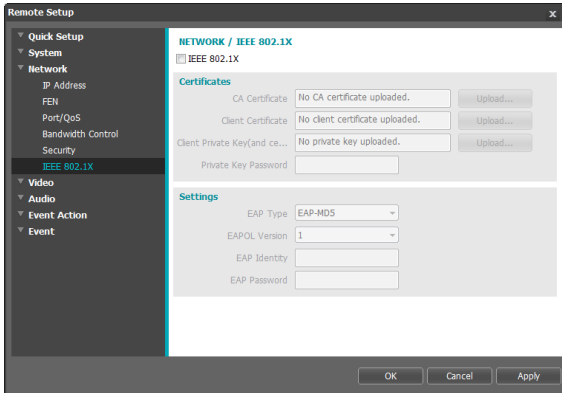

- **Certificates**: Upload a certificate or a private key. You may be prompted to enter a password for the private key.

- **Settings**: Configure EAP (Extensible Authentication Protocol) settings.

  - **EAP Type**: Choose a network connection authentication method. Selected method must be identical to the authentication method used on the authentication server.
  - **EAPOL Version**: Choose EAP authentication's version.
  - **EAP Identity/EAP Password**: Enter authentication ID and password.

> The authentication server and AP must support IEEE 802.1X authentication in order for the IEEE 802.1X network connection authentication feature to function properly.

Video
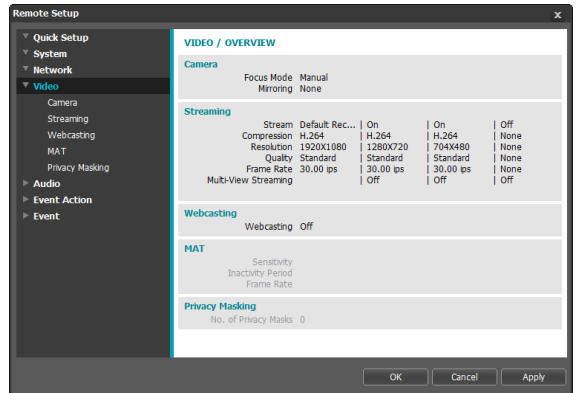

Configure **Camera**, **Streaming**, **Webcasting**, **MAT**, and **Privacy Masking** options.

Camera

Image Sensor

Configure **Image Sensor** settings.

- **Frame Rate**: Set the frame rate of image sesor. Selecting **30.00 ips** limits the frame rate of images for streaming under **Video > Streaming** menu to **30.00 ips**. Selecting **60.00 ips** restricts some settings under **Video > Streaming** menu and disables the following functions: FTP upload, image attachment of emailing, and WDR. If this option has been changed, **Remote Setup** will terminate after applying the current settings.

- **Mirroring**: Select Horizontal Reverse or Vertical Reverse to flip the image horizontally or vertically.

- **Sharpness**: Adjust the sharpness level. Adjust the contours to make the images look sharper. Increasing the value raises the sharpness level, but using too high a value can result in unwanted noise.

- **Noise Filter**: Select the noise filter level. Noise filter can reduce the noise in images taken under low-lighting conditions. Increasing the value reduces the noise, but using too high a value can result in blurry images.

- **3DNR**: Set whether to enable or disable 3DNR (3D Noise Reduction). When 3DNR is enabled, the level of background noise is reduced in low light conditions. It does not cause overall image blurring which might occur when using noise filter, but it may cause afterimage (lag).

White Balance

Configure **White Balance** settings.
- • **Mode**: Set the white balance mode.

  - **Auto**: Select to adjust the white balance automatically. The system identifies the light source of where the camera is installed and sets up the proper white balance for the conditions.

  - **Auto (WIDE)**: The wider range of color temperature is set than that of Auto mode. This function is suitable when the camera is installed outdoor.

  - **Auto (FULL)**: Adjust the white balance of whole image area displayed on the screen. This function is suitable when the light source of where the camera is installed is special color.

  - **Color Temperature**: Set the color temperature manually.

  - **Flames ~ Shade**: Select the type of light source of where the camera is installed to set the proper white balance for the conditions.

Exposure

Configure **Exposure** settings.
- • **AE Target Gain**: Specify exposure compensation's target gain. Exposure is compensated automatically based on the specified target gain. Higher the gain, brighter the images.

- • **WDR**: Disables or enables the WDR(Wide Dynamic Range). When the very dark and very bright areas exist simultaneously on the screen, WDR allows you to recognize the both areas.

- **Anti-Flicker**: If the lights in the area where the camera is located use alternating current, specify the frequency of the lights to minimize flickering. Matching the frequencies can reduce flickering. (NTSC: 60Hz, PAL: 50Hz)

- **Slow Shutter**: Activate **Slow Shutter**. The slow shutter mode functions only at night. When the slow sh utter mode is enabled, images are displayed bright even in the low light conditions.

- **Shutter Speed Control**: Adjust Shutter Speed. This option is available only when **Anti-Flicker** and **Slow Shutter** are both set to **Off**.

  - **Auto**: The system will assess the lighting conditions and adjust the shutter speed automatically.

  - **Manual**: Use the slider to select the desired shutter speed. Select the most suitable minimum and maximum shutter speeds for the lighting conditions in the area where the camera is located.

  > With certain features, selecting **Auto** automatically loads settings suitable for the camera's installation environment.

Day & Night

Configure **Day & Night** settings.
- **B&W Mode**: Display the images in greyscale for greater clarity in low-lighting conditions.

  - **On/Off**: Enable/disable B&W Mode.

  - **Auto**: Allow the system to enable/disable B&W Mode automatically.

  - **Schedule**: Set up a B&W Mode schedule. B&W Mode is enabled on days and times designated as **Nighttime** and disabled at all other times. Select **On** or **Off** at the bottom of the schedule table and then click or drag on the dates and times to select/unselect as **Nighttime**. Select **On** or **Off** and then click **Select All/Clear All** to select/unselect all dates and times as Nighttime.

- **IR Cut Filter**: IR Cut Filter blocks out the infrared spectrum. You can ensure clear images at all times by blocking out the infrared spectrum in high-lighting conditions and allowing the infrared spectrum to pass through in low-lighting conditions.

  - **Nighttime Mode**/**Daytime Mode**: Disables or enables the IR cut filter.
  - **Auto**: Allow the system to enable/disable IR Cut Filter automatically.
  - **Schedule**: Sets up the IR cut filter schedule. The IR cut filter is disabled during the date and time scheduled as **Nighttime** and enabled during the rest. Set up or release Nighttime by selecting **On** or **Off** in the bottom and clicking or dragging the date and time area in the table. Selecting On or Off and clicking the **Select All/Clear All** button sets up or releases Nighttime for all dates and time.

- **Refocus**: Disables or enables refocusing. If enabled, the system readjusts the lens' focus when the daytime mode switches to the nighttime mode or vice versa. It prevents video from losing focus due to the infrared spectrum.

- **Switching Level**: Sets up the switching level between the daytime mode and nighttime mode. For example, if the darkness level is set to **3** and brightness level to **5**, the system switches to nighttime mode when in the lighting condition of level 3 or below and to daytime mode when in the lighting condition of level 5 or over. It is recommended that you do not set up the darkness level and brightness level identically;otherwise, this function may not work properly. This functions only when **B&W Mode** or **IR Cut Filter** is set to **Auto**.

Miscellaneous

Configure **Miscellaneous** settings.
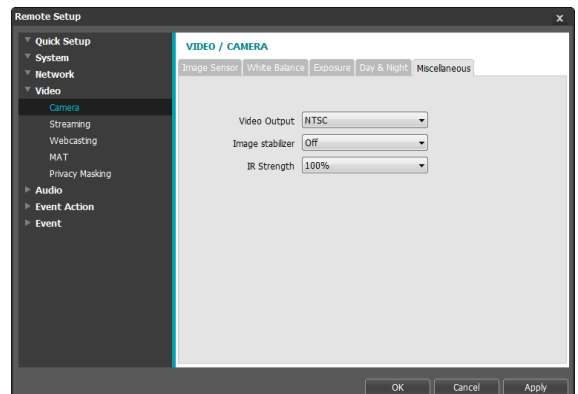

- **Video Output**: Select a video output signal format.

- **Image Stabilizer**: Disables or enables the image stabilizer function. When the image stabilizer is enabled, it reduces blurring caused by camera shake that results from external conditions such as the wind.

- **IR Strength**: Set the brightness of the IR LED. The higher the value is set, the brighter it is.

Streaming

- **Primary/Secondary/Tertiary/ Quaternary**: Multistreaming is supported (priority: Primary > Secondary > Tertiary > Quaternary). Enable/disable streaming use.

- **Compression**: Choose the streaming compression method.

- **Resolution**: Choose a resolution setting for video streaming.

- **Quality**: Choose a quality setting for video streaming.

- **Target Bitrate (Kbps):** Set the target bitrate. When **Quality** is set to **Manual**, you can configure the value of target bitrate. If not, it appears the set value of the target bitrate for each **Quality**.

- **Frame Rate**: Choose a frame rate setting for video streaming.

- **Default Record Stream**: Choose a stream to use for recording. This setting, however, may not apply if a recording stream has been designated from the remote program.

- **Multi-View Streaming**: Designate a specific area of the screen and stream images from that area only. (not supported for the primary stream) Click **Setup** to designate a streaming area.

Select **On** and then specify the streaming area's resolution.

- **Resolution Limit**: Indicates the maximum resolution that can be set for the streaming area.

- **Resolution**: Designate a streaming area. Designated area is marked in red on the screen. You can adjust the resolution of the area or reposition the area by dragging and dropping using the mouse.

- **Current Resolution**: Displays the resolution of the designated streaming area.

- **Video Output**: Display whether the BNC video output works or not. The BNC video out may not work depending on the settings under **Video > Streaming**.

> If multiple users are connected to the camera, the increase in bandwidth use can lower the frame rate.

Webcasting

Use the webcasting service to view live images from the camera on a web site.
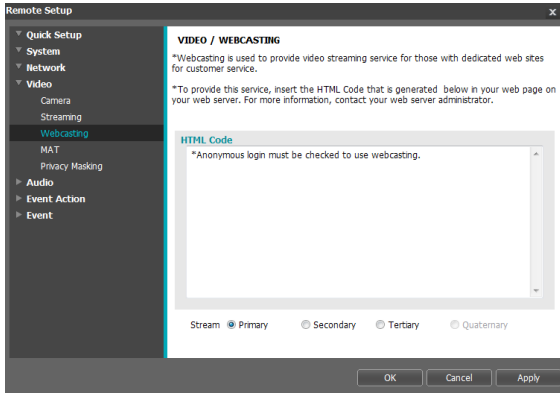

- **HTML Code**: Copy and paste the html code shown on the screen within the code of the web page you want the video to be displayed.

- **Stream**: Choose a stream to use for webcasting. Only a stream currently in use can be selected.

> ✓ In order to use the webcasting service, the **Allow Anonymous Login** option under **System > User/ Group** must be selected.

MAT

Select the **MAT** option to use the MAT (Motion Adaptive Transmission) feature during video transmission and recording.
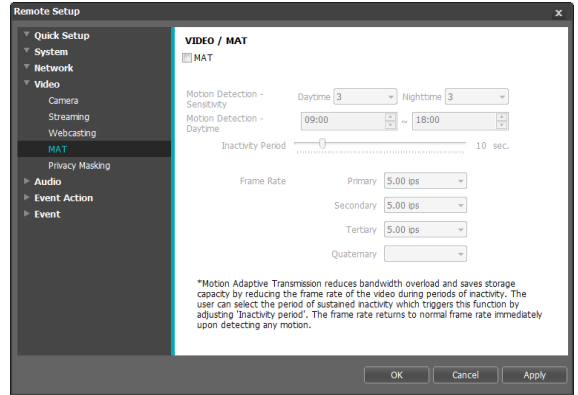

- **Sensitivity**: Set the motion detection sensitivity. Higher values will result in more sensitive motion detection. This function is interworking with the setting of **Event > Motion Detection** menu.

- **Daytime**: Set the daytime range. The camera will consider the remaining time range as the nighttime. This function is interworking with the setting of **Event > Motion Detection**.

23

- **Inactivity Period**: Set the Inactivity Period. If motion is not detected for the duration of time specified, video is transmitted and recorded using the frame rate designated below until movement is detected again.

- **Frame Rate**: Designate the frame rate to be used between the end of the Inactivity Period and the next motion detection. Video is transmitted and recorded at the designated frame rate between then end of the Inactivity Period and the next motion detection. Once motion is detected again, the frame rate designated under **Streaming** is restored immediately.

✓ **MAT (Motion Adaptive Transmission)** is a feature that lowers the frame rate when motion is not detected to reduce the load on the network and save on storage space. Based on the specified sensitivity setting, no movement will be assumed if there is no change between two consecutive images.

Privacy Masking

Select **Privacy Masking** to set up a privacy mask over a specific area. The section on which a privacy mask is applied will appear as black when monitoring video.
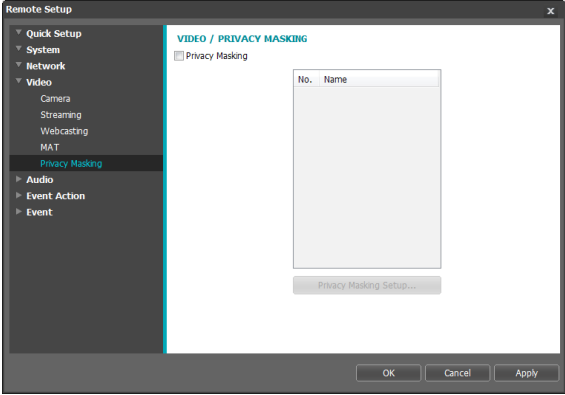

• **Privacy Masking Setup**: Set up privacy masks. (Up to 16)

Privacy Masking - Setup
- ✋ **(Select)**/✋ **(Unselect)**: Set or remove a privacy mask. Click on the button and drag & drop using the mouse to set up a privacy mask.
- **No./Name**: Displays a list of active privacy masks. The numbers indicate privacy mask numbers. Select the empty space next to a number to assign a name to the corresponding privacy mask. Click **Delete** to remove the selected privacy mask.

Audio

Configure audio in/out settings.
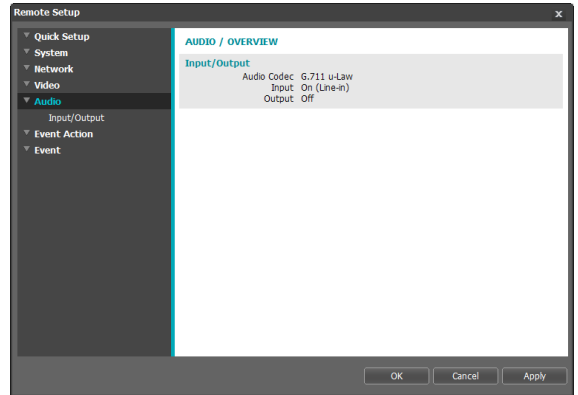

In/Out
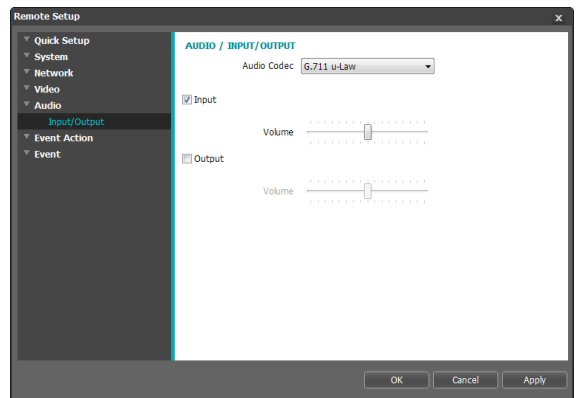

• **Audio Codec**: Select an audio codec.

• **Input**: Select an option and then adjust the volume.

• **Output**: Select an option and then adjust the volume.

Cameras do not feature built-in audio amplifier units and therefore require the user to purchase a speaker system with a built-in amplifier separately.

Event Action

Designate event detection alert actions.
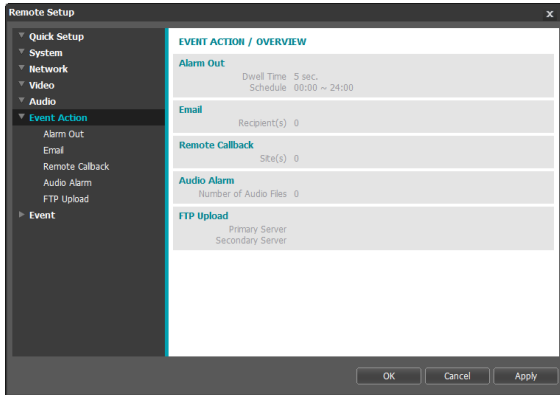

Alarm out

Select **Alarm Out** to enable alarm out.
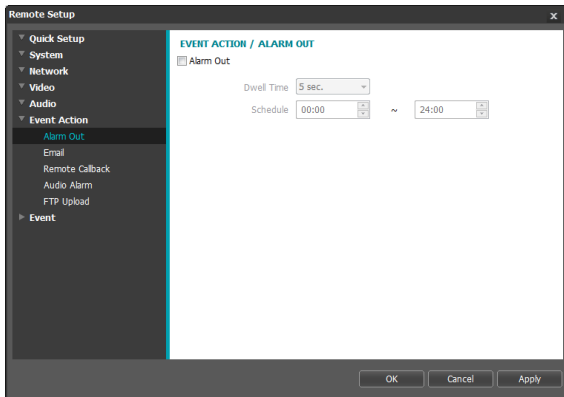

- **Dwell Time**: Designate the alarm out duration. When an event occurs, alarm out will be generated for the specified duration.

- **Schedule**: Specify the alarm out schedule. Alarm out is generated during the specified period only.

Email

Select **Email** to send out emails.
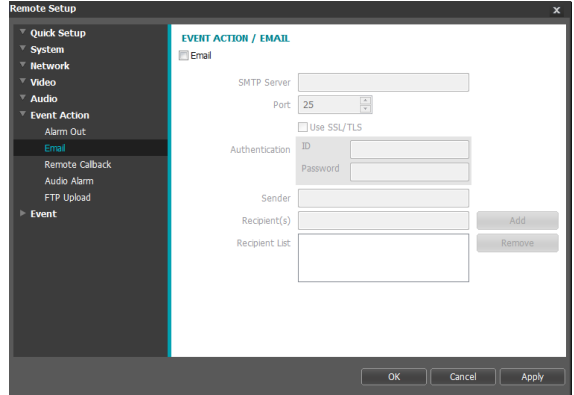

- **SMTP Server/Port**: Enter the SMTP server's IP address (or domain name) and port number you received from the network administrator. If a DNS server has been set up during network configuration, you can enter a domain name instead of an IP address. If using an SMTP server requiring an SSL connection, select the **Use SSL/TLS** option.

- **Authentication**: Enter a user ID and password if user authentication is required by the SMTP server.

- **Sender/Recipient(s)**: Enter the sender and recipients' addresses. (Up to 10) The addresses must be properly formatted and include the @ symbol.

Remote Callback

Select **Remote Callback** to send callback messages to a remote system.

> • Not supported from the IDIS Web program.
> • The camera must be registered to the remote system in order to use the **Remote Callback** feature.
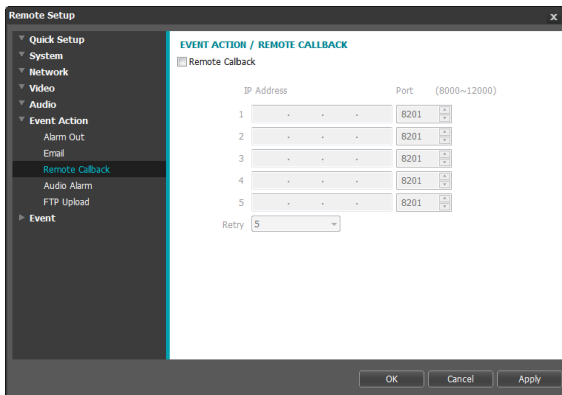

- **IP Address**: Enter the IP address and port number of the remote system that will receive the messages.
- **Retry**: Designate how many reattempts to make if message delivery fails.

Audio Alarm

Select **Audio Alarm** to generate audio.
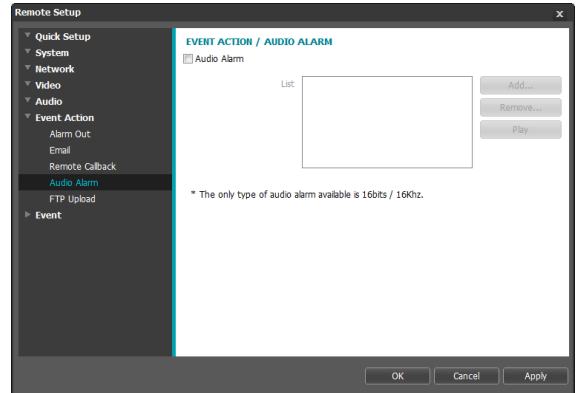

- **List**: Displays a list of audio files to playback. Click **Add** or **Remove** to add/remove audio (.wav) files. (supports 16-bit, 16KHz encoded files only) Select an audio file from the list and then click **Play** to listen to the file.

FTP Upload

Select **FTP Upload** to upload .jpg image of the event detected to an FTP server.
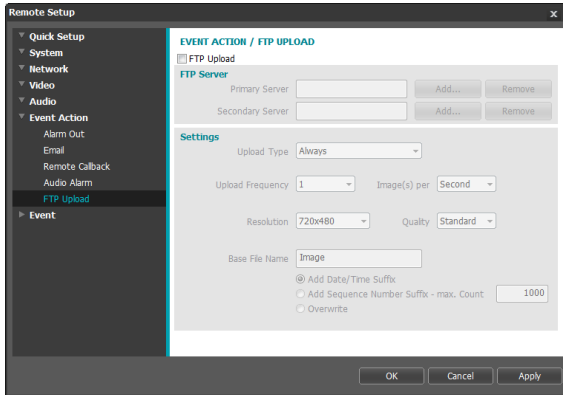

- **FTP Server**: Click **Add** to register a new FTP server. Click **Remove** to remove a registered FTP server. When an event is detected, a .jpg image of the event detected image is uploaded to the Primary Server. If the upload to the Primary Server fails, the file will be uploaded to the Secondary Server. Upload to the Secondary Server will continue to be attempted until successful. Fill out the fields below and click **Test** to test the FTP server connection settings. Once the test is complete, click **OK**.

- **FTP Server**: Enter the FTP server's IP address (or domain name).
- **Upload Path**: Designate the file upload path.
- **Port**: Enter the FTP server's port number.
- **User ID, Password**: Enter the user ID and password needed for connecting to the FTP server.

- **Settings**: Configure image and upload settings.
  - **Upload Type**: Choose an upload type. Select **Always** to upload images using the settings below, irrespective of event detection. Select **Event** to upload images using the settings below when an event is detected.
  - **Upload Frequency**: Activated only when Upload Type has been set to **Always**. Designate the upload speed. The specified number of images will be uploaded to the FTP server during the specified period of time.
  - **Upload 1 image per**: Activated only when Upload Type has been set to **Event**. Designate the upload speed. Select **Upload** for and specify a duration. Images will be uploaded for the specified duration at the specified upload speed. Select **Upload while event status is active** to upload images at the specified speed only while event status is active.

- **Resolution/Quality**: Choose the resolution and quality of the images to upload to the FTP server.Range of resolution settings you can use here can vary depe nding on the resolution setting applied under **Video > Streaming**.
- **Base File Name**: Enter a name for the files to be uploaded to the FTP server and then choose file identification options. Select **Add Date/Time Suffix** to add event detection date and time information to each image file. Select **Add Sequence Number Suffix - max. Count** to number the image files based on the order of event detection. Select **Overwrite** to overwrite the previous image with the new image. Event type is automatically added to the file names.

> ✓
> - When specifying the **Upload Path** or **Base File Name**, you cannot use special characters such as \, /, #, *, |, :, ", <, >, and ?.
> - The resolution of FTP upload image can change depending on the resolution setting applied under **Video > Streaming**.
> - Set speed settings for Upload Frequency and Upload 1 image per options in consideration of the FTP server's performance. FTP uploads can fail if the configured speed is higher than what the FTP server can handle.

Event

Configure event detection settings.
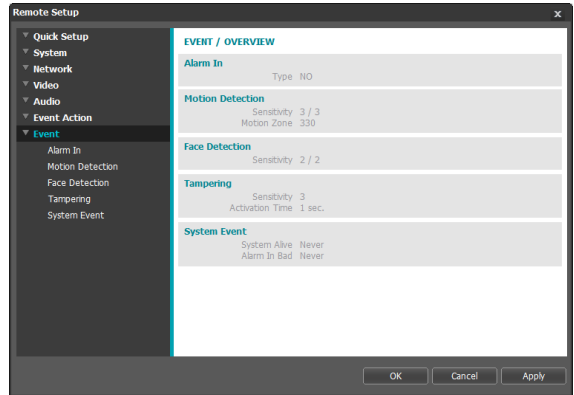

Alarm In

Select **Alarm In** to enable alarm in event. With alarm in event enabled, alarm in detections by the alarm in connector will be assumed as events.
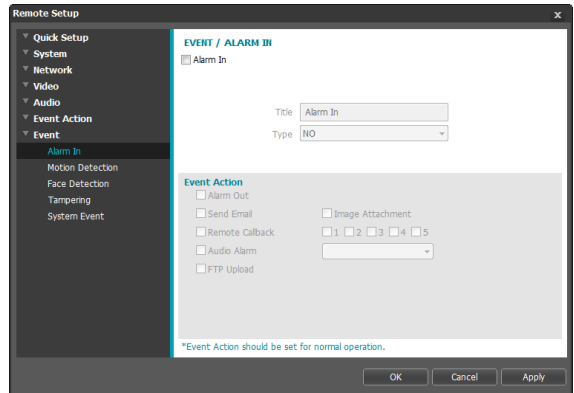

- **Title**: Enter the alarm-in device's name.

- **Type**: Select the alarm in type.

- **Event Action**: Select an alarm in event alert action.

  - **Alarm Out**: Select if you wish to generate an alarm out.

  - **Send Email:** Select if you wish to send an email. Select the **Image Attachment** option to attach a .jpg image of the event detected to the email.

  - **Remote Callback:** Select this option to send a message to a remote system and then select which system to send the message to.

 | ✓ | • Not supported from the IDIS Web program. |
    |---|---|
    | | • The camera must be registered to the remote system in order to use the **Remote Callback** feature. |

  - **Audio Alarm:** Select this option to generate an audio alert and then choose an audio file (.wav).

  - **FTP Upload**: Select this option if you wish to upload images to the FTP server.

✓	**Event Action** settings must be configured correctly in order to perform event actions.

Motion Detection

Select **Motion Detection** to configure motion detection event settings. With motion detection event enabled, motion detections within the designated area will be assumed as events.
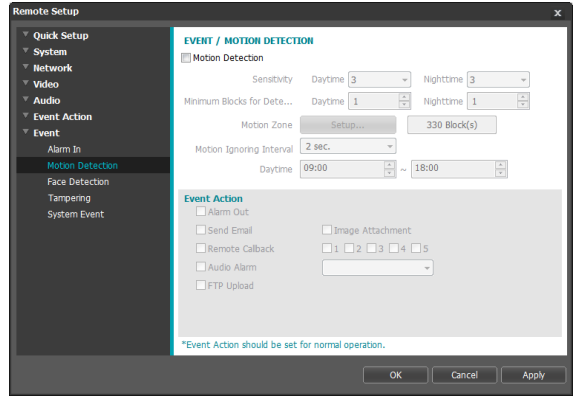

- **Sensitivity**: Select daytime and nighttime motion detection sensitivity levels. Higher values will result in more sensitive motion detection.

- **Minimum Blocks for Detection**: Select minimum blocks for daytime and nighttime motion detection. Motion must take place over the selected number of blocks in order for it to be considered as a motion detection event.

- **Motion Zone**: Click **Setup** and define the motion zone using blocks.

  - ⊕ **(Select)/**⊘ **(Unselect)**: Enable/disable motion detection.

  - ⟋ **(Single Block)**: Select/unselect motion detection blocks individually.

  - ⬚ **(Zone)**: Select/unselect multiple motion detection blocks.

  - ⊞ **(All)**: Select/unselect all motion detection blocks.

- **Motion Ignoring Interval**: With Motion Ignoring Interval configured, no event log or notification is generated for motions detected during a period of time following a motion detection event.

- **Daytime**: Specify when daytime starts and ends. All other times will be assumed as nighttime.

- **Event Action**: Select a motion detection event alert action.

  - **Alarm Out**: Select if you wish to generate an alarm out.

  - **Send Email**: Select if you wish to send an email. Select the **Image Attachment** option to attach a .jpg image of the event detected to the email.

  - **Remote Callback**: Select this option to send a message to a remote system and then select which system to send the message to.

    > ✓
    > - Not supported from the IDIS Web program.
    > - The camera must be registered to the remote system in order to use the **Remote Callback** feature.

  - **Audio Alarm**: Select this option to generate an audio alert and then choose an audio file (.wav).

  - **FTP Upload**: Select this option if you wish to upload images to the FTP server.

    > ✓ **Event Action** settings must be configured correctly in order to perform event actions.

Face Detection

Select **Face Detection** to configure face detection event settings. With face detection event enabled, detections of face with designated size will be assumed as events.
- **Max Detect Count**: Select the number of faces to be detected. Only the designated number of faces is detected when a face detection event occurs.

- **Sensitivity**: Select face detection sensitivity levels. Higher values will result in more sensitive face detection. If **Max. Detect Count** is set to **32**, faces are detected in the sensitivity level of **5**.

- **Minimum Face Size**: Select the face size for event detection. A face size must be bigger than the designated size in order for it to be considered as a face detection event.

- **Event Action**: Select a motion detection event alert action.
  - **Alarm Out**: Select if you wish to generate an alarm out.
  - **Send Email**: Select if you wish to send an email. Select the **Image Attachment** option to attach a .jpg image of the event detected to the email.
  - **Remote Callback**: Select this option to send a message to a remote system and then select which system to send the message to.

    - Not supported from the IDIS Web program.
    - The camera must be registered to the remote system in order to use the **Remote Callback** feature.

  - **Audio Alarm**: Select this option to generate an audio alert and then choose an audio file (.wav).
  - **FTP Upload**: Select this option if you wish to upload images to the FTP server.

    Event Action settings must be configured correctly in order to perform event actions.

Tampering

Select **Tampering** to configure tampering detection event settings. With tampering detection event enabled, a sudden change in the video, such as due to movement of the camera or covering up of the lens, will be assumed as an event.
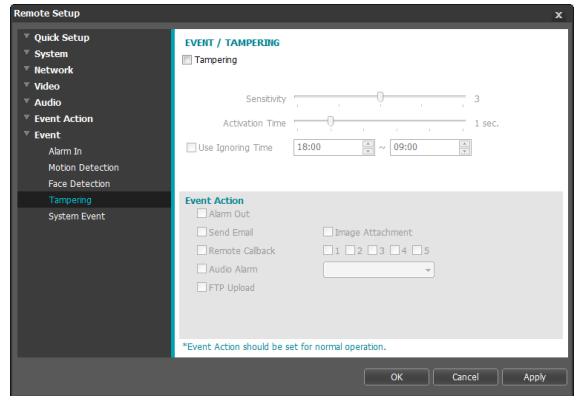

- **Sensitivity**: Define the tampering detection sensitivity. Higher values will result in more sensitive detection.
- **Activation time**: Specify how long tampering has to be detected for it to be considered as an event. Tampering detections that do not last for the specified duration of time will not be considered as events.
- **Use Ignoring Time**: Define the event ignoring time. Tampering detections taking place during the defined time range will not be assumed as events.

- **Event Action**: Select a tampering detection event alert action.

  - **Alarm Out**: Select if you wish to generate an alarm out.

  - **Send Email**: Select if you wish to send an email. Select the **Image Attachment** option to attach a .jpg image of the event detected to the email.

  - **Remote Callback**: Select this option to send a message to a remote system and then select which system to send the message to.

✓	• Not supported from the IDIS Web program.
	• The camera must be registered to the remote system in order to use the **Remote Callback** feature.

  - **Audio Alarm**: Select this option to generate an audio alert and then choose an audio file (.wav).

 - **FTP Upload**: Select this option if you wish to upload images to the FTP server.

✓	**Event Action** settings must be configured correctly in order to perform event actions.

System Event

Select **System Event** and configure system event settings. With system event enabled, system status and alarm in status will be checked periodically and corresponding alerts will be generated.
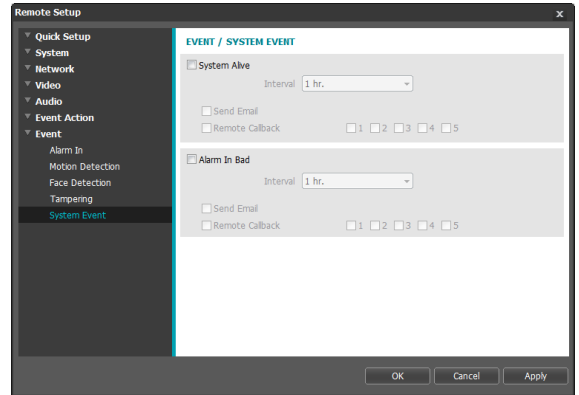

- **System Alive**: Select to check the system status and then set up a schedule.

  - **Send Email**: Select to send out an email when the system comes on line.

  - **Remote Callback**: Select this option to send a message to a remote system when the system comes on line and then select which system to send the message to.

- **Alarm In Bad:** Select to check the alarm in status and then set up a schedule.

  - **Send Email**: Select to send out an email if no change is detected in the alarm in status.

  - **Remote Callback:** Select this option to send a message to a remote system when the SD memory card is inserted/removed and then select which system to send the message to.

 | ✓ | • **Email** and **Remote Callback** settings under **Event Action** must be configured correctly in order to send out emails and messages. |
  |---|---|
  | | • **Remote Callback** is not supported on IDIS Web. |
  | | • The camera must be registered to the remote system in order to use the **Remote Callback** feature. |

Part 2 - IDIS Web

IDIS Web is a program that allows you to view video from remote locations over the Internet and can be accessed on a Microsoft Internet Explorer.

System requirements for running IDIS Web are as follows:

- OS: Microsoft® Windows® XP (Service Pack 3), Microsoft® Windows® Vista (Service Pack 1), Microsoft® Windows® 7 (Home Premium, Professional, Ultimate), Microsoft® Windows® 8 (Pro, Enterprise)
- CPU: Intel Pentium IV 2.4GHz or above (Core 2 Duo E4600 recommended)
- RAM: 1GB or more
- VGA: 128MB or more (1280x1024, 24bpp or above)
- Internet Explorer: Version 8.0 or later 32-bit

1 Launch Internet Explorer and then enter the following information in the address bar.

- http://IP Address:Port Number (IDIS Web connection port number selected during camera IP address and port number setup)

- Or http://FEN Server Address/FEN name (FEN Server address and FEN name registered to the FEN Server)

- Or http://web.idisglobal.com (it is required to enter the camera IP address when logging in. If the camera uses the FEN feature, you can enter the FEN name registered to the FEN server instead of the camera IP address after selecting the USE FEN option)

✓ • If the Use HTTPS option has been selected during IDIS Web port number setup, enter https instead of http. If prompted with a security certificate warning, select "Continue to this website (not recommended)." If the IDIS Web login page fails to load, configure Internet Explorer's settings as follows:
  – Tools → Internet Options → Security → Custom Level... → Medium-high (default) or Medium.
  – Tools → Internet Options → Advanced → Security → Use TLS 1.0 (select)
  • If connecting by entering an IP address and a port number, you can connect by entering just the IP address if IDIS Web connection port number has been set to 80 (443 when entering https).
  • If connecting by entering http://web.idisglobal.com, it is required to enter the Watch port number.
  • Contact your network administrator for the IP address of the camera you wish to connect to the IDIS Web pot number.
2 When prompted with the IDIS Web login window, select **LIVE-PORT** or **PLAY-PORT** as the desired mode. Enter the ID and password and click **LOGIN** to sign in using the selected mode.

- IDIS Web supports Microsoft Internet Explorer only and no other type of web browser.
- IDIS Web does not work with Microsoft® Windows® 8 metro UI.
- To use IDIS Web on Microsoft Windows Vista or above, launch Internet Explorer by right-clicking on the icon and selecting the **Run as administrator** option. Otherwise, certain IDIS Web functions might not be available.
- When running IDIS Web, the bottom section of the screen may get cut off if the address bar or the status bar is shown. In this case, change Internet Options so that the address bar or the status bar is hidden. (**Tools** → **Internet Options** → **Security** → **Custom level...** → **Allow websites to open windows without address or status bars** (**Enable**))
- Launching a new version of IDIS Web for the first time can cause Internet Explorer to load information from the previous version. In this case, navigate to **Tools** → **Internet Options** → **General**, delete temporary Internet files, and then restart IDIS Web.
- On Microsoft Windows Vista or above, lowered image transmission rate can prevent the screen from being displayed or updated. In this case, we recommend that you disable the computer's auto tuning function. Open the command prompt as an administrator. (**Start** → **Accessories** → **Command Prompt** → **Right-Click** and then select **Run as administrator**) Type in "**netsh int tcp set global autotuninglevel=disable**"and then press Enter. Restart the computer to apply the change. To enable auto tuning again, launch the command prompt as an administrator and then type in "**netsh int tcp set global autotuninglevel=normal**". Restart the computer to apply the change.

Web Live Mode

A remote web monitoring program that allows you to monitor images from remote locales in real-time.

❶	Press ✕ to terminate IDIS Web.
❷	Place the mouse pointer on the logo to check IDIS Web's version.
❸	Displays the current time.
❹	Click ▣ to view the video in full screen. Press the ESC key on the keyboard to return to the previous screen.
❺	Click 🖶 to print the current video screen using a printer connected to the computer.
❻	Click 🖼 to save the current video screen as an image file.
❼	Click ⚙ to configure rendering mode and OSD settings. Select rendering mode to adjust the video output rate or select which OSD elements to display on the screen from the OSD list.
❽	Click 🎥 to load the camera setup window.
❾	This function is not supported.

⑩	Shows login information.
⑪	Indicates the camera's number.
⑫	Used to control zoom at a remote location.
⑬	Used to adjust live video quality.
⑭	Click `On` `Off` to control the alarm out device connected to the camera.

| ⑮ | Event status window at the bottom of the screen displays a list of events detected at remote locales. |

🔔 / 🔔	Enable/Disable Alarm In	👤	Face Detection
🏃	Motion Detection	🗺	Tampering

	Right-click on the screen to display the pop-up menu.

• **Change Camera Title**: Used to change the camera's name.
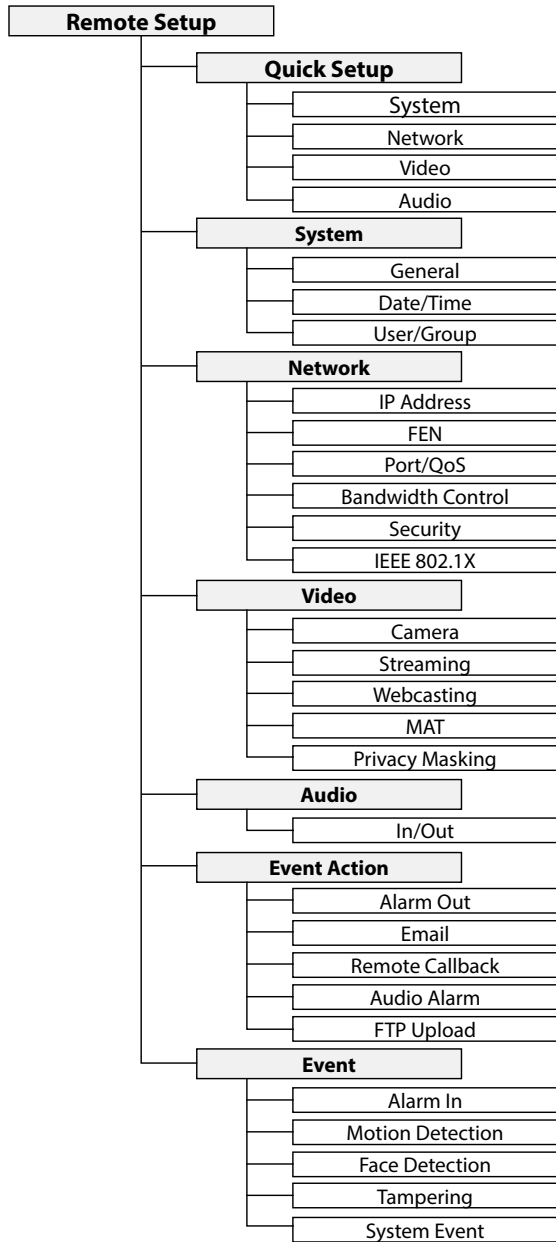

> ✓ Renaming the camera in Web Live mode does not affect the camera's name on the remote system. If no name is entered for the camera, the name used at the remote locale is shown on the screen.

> Change Camera Title
> Enable Audio
> Aspect Ratio ▸
> MultiStream ▸
> ✓ Anti-Aliasing Screen
> Draw Face Detection
> Mouse PTZ Control
> OneClick Move

• **Enable Audio**: Enables audio transmission with remote locales. Select to display 🔲🔊✕ buttons.

🔲	Enables transmission of audio to the remote locale via microphone.
🔊	Enables playback of audio from the remote locale on speakers.
🔲 / 🔊	Enables two-way audio communication with the remote locale.
✕	Disables audio transmission.

> ✓ If the remote locale connected to supports audio transmission, 🔊 icon appears on the corresponding camera screen.

⑯

• **Aspect Ratio**: Change the aspect ratio of the video displayed on the screen.
  - **Fit to Screen**: Fit the video to the size of the camera screen.
  - **Fit to Aspect Ratio**: Resizes camera screen to original aspect ratio of the video.
  - **Half Size (x0.5) - 4 Times Bigger (x4)**: Displays the camera videos in the selected size based on the original size of the video. For example, original size (x1) displays the video in its original size. Half size (x0.5) through 4 times larger (x4) options are only available if there is enough space on the camera screen to accommodate the selected size.

• **MultiStream**: If the camera is running on multi-stream mode, you can choose between the streams.

• **Anti-Aliasing Screen**: Removes stair step effect (blocks) that are caused when zooming a video to improve overall quality of video output.
